

Tiled Roof

PART OF ABSOLUTE WINDOW CO

Turn your conservatory into a *year-round* room.

Supalite tiled conservatory roof systems — supplied and installed across Greater Manchester. Building Regulations compliant. 10-year insurance-backed guarantee.

THE PRODUCT

The room you stopped using is about to become your favourite.

Most conservatories were sold as “extra living space”. Most actually deliver about three months of usable space — freezing in winter, an oven in summer, and a write-off whenever it rains.

A Supalite tiled roof reverses every one of those problems. Same room, same windows, same doors — but with a fully insulated lightweight tiled roof above and a smooth vaulted plastered ceiling beneath. It reads like an extension. It performs like an extension. And it goes on without rebuilding the conservatory underneath.

Most clients tell us, about a month in, that they'd have done it years ago.

WHAT IS A SUPALITE ROOF?

A purpose-engineered tiled roof, designed for your existing conservatory.

Supalite is the UK's leading lightweight tiled conservatory roof system. It replaces tired polycarbonate or glass with a layered, fully insulated structure that performs like a new-build extension roof — but is engineered to drop onto your existing conservatory base and frame in most cases. No rebuild, no planning permission needed in almost every case, and no months-long disruption.

Building Regulations compliant

Approved under Stroma Building Control, with LABC and LABSS recognition. Your roof meets current standards as standard.

U-value 0.15 W/m²K

Better than current Building Regs minimum for new-build extension roofs. Enhanced spec available down to 0.12 W/m²K.

Lightweight by design

Aluminium spaceframe and lightweight tile system — engineered to fit onto existing conservatory bases without rebuild.

Vaulted plastered ceiling

Smooth painted internal finish. Add a pelmet, downlighters or a Sky Vista rooflight during the build.

Choice of tile system

Extralight or Tapco — both lightweight, both Building Regulations compliant, available in a wide colour range.

10-year insurance-backed guarantee

Covers system and workmanship. Underwritten independently by IWA — honoured regardless of trading status.

Six layers, top to bottom.

Every Supalite roof is built up the same way — engineered for thermal performance, structural integrity, and a clean internal finish. Outside it reads as a solid tiled roof; inside, as a vaulted plastered ceiling. In between, the layers do the work.

01

Lightweight tile finish

External tile in your choice of profile and colour. Slate-style Extralight or composite Tapco — both engineered to be a fraction of the weight of traditional clay or concrete tile.

02

Tile battens & counter-battens

Treated softwood, set to the tile manufacturer's gauge. Provides a ventilated cavity above the membrane.

03

Breathable roof membrane

High-performance vapour-permeable underlay. Lets internal moisture escape, keeps weather and wind-driven rain out.

04

Aluminium spaceframe

Pre-fabricated structural frame, sized to your conservatory. Carries all the loads down into the existing frame and base — no external props, no rebuild.

05

High-performance insulation

Over 150 mm of humidity-proof insulation, sealed against air leakage. This is what gives the roof its 0.15 W/m²K U-value.

06

Plasterboard & skim finish

Vapour barrier, then taped-and-jointed plasterboard, then a plaster skim coat. Decorate it like any other ceiling. Add downlighters, a pelmet or a Sky Vista rooflight during the build.

TILE OPTIONS

Two tile systems. Both lightweight. Both Building Regulations compliant.

Every Supalite roof we install uses one of two engineered tile systems — Extralight or Tapco. Both are approved as part of the Supalite system. The right choice depends on the look you're after and how the tile sits against your brick.

LIGHTWEIGHT TILE

Extralight

Engineered slate-effect and shingle tile in a contemporary profile. The lightest of the two systems — ideal where the existing base is borderline or where you want the cleanest possible roofline.

Classic Black

Charcoal

Ember

Walnut

COMPOSITE SLATE

Tapco Slate

Composite slate tile with a deeper, more textured profile and a wider colour range — including warmer reds and earthy tones. A more traditional aesthetic that blends with older roof lines and period homes.

Pewter Grey

Stone Black

Brick Red

Chestnut Brown

Plum

Real samples of both Extralight and Tapco brought to every survey, so you can hold them against your brick.

Want light? Add a Sky Vista.

Optional rooflights designed specifically for the Supalite system, built into the tiled roof during the install. Not part of the standard build — you choose at survey whether you want them.

OPTIONAL ROOFLIGHT

Sky Vista

A flat, double-glazed rooflight built into the tiled roof. Brings daylight into the room without losing the thermal performance of the surrounding insulation. One, two or more — depending on conservatory size.

Insulated frame

Double-glazed

10-yr IBG

HEATED-GLASS UPGRADE

Sky Vista with Glow

Optional upgrade to the Sky Vista — the glass itself is heated. Warms the room from above through the rooflight rather than relying solely on a radiator. Quick to bring up to temperature, no moving parts, nothing on the wall.

Heated glass

Wired during build

Add-on to Sky Vista

The numbers.

Independently tested. Building Regulations compliant. Approved under the Stroma Building Control scheme as a registered Supalite system (Certificate 14005), with LABC and LABSS recognition.

THERMAL U-VALUE

0.15 W/m²K

Standard spec. Enhanced to 0.12 W/m²K available.

SYSTEM WEIGHT

~ 40 kg/m²

Engineered to fit onto existing conservatory bases in most cases.

FIRE RATING

BROOF(t4)

The highest external roof fire-resistance classification under EN 13501-5.

INSULATION DEPTH

150 mm+

Humidity-proof insulation, sealed against air leakage.

TYPICAL INSTALL

5–10 days

Most roofs weather-tight by day 2 or 3. Internal finish and decorating prep takes the balance.

IBG TERM

10 years

Insurance-backed guarantee covering system and workmanship. Underwritten by IWA.

LABC

Approved system

LABSS

Approved system

Stroma 14005

Building Control cert

From first call to year-round room, in about six weeks.

No high-pressure sales appointments. No today-only discounts. A surveyor, a quote, an install — the way it should be done.

01

Free home survey

Within a few days of your enquiry. About an hour on site, with real tile samples and a tablet of completed installs. No commitment.

02

Fixed-price quote

Within 3–5 working days of the survey. Detailed specification, broken down by line. Take it home, compare it, decide in your own time.

03

Installation in 5–10 days

Typically 4–6 weeks after sign-off. Our own teams, fully insured. Most roofs weather-tight by day 2 or 3.

04

Aftercare & guarantee

10-year insurance-backed guarantee paperwork on handover. Direct line to the same office for anything else, ever.

WHY TILED ROOF

You're not buying from a stranger.

Tiled Roof is the conservatory-roof specialist arm of **Absolute Window Co** — an established Greater Manchester window, door, conservatory and shopfront installer based in Worsley since 2004. Same premises. Same teams. Same accreditations.

- ✓ **FMB & CERTASS registered** — via Absolute Window Co
- ✓ **Supalite Approved Installer** — trained on the system itself
- ✓ **Our own installation teams** — not subcontractors
- ✓ **No high-pressure sales. Ever.** — no today-only discounts, no closers
- ✓ **10-year insurance-backed guarantee** via IWA
- ✓ **Building Regulations compliant** — LABC & LABSS approved system

NEXT STEP

Book a free home survey.

We'll measure up, talk through tile and ceiling options, and give you a fixed-price quote. No pressure either way. Survey takes about an hour. Quote follows within five working days.

If you'd rather start with a phone conversation — what we install, how it works, what your conservatory might cost — the office number below is answered the same way the website is written: by people who actually do the work.
